Description

The carburetor heater kit is recommended for improved cold starting in locations where the temperatures falls below 0°C (32°F). The carburetor heater prevents condensation and carburetor icing. The heater turns on when the temperature at the thermostat falls below approximately 4°C (40°F) and turns off when the temperature rises above approximately 16°C (60°F).

The carburetor heater for 6-14 kW models mounts between the engine air cleaner and the carburetor.

The carburetor heater for 17-20 kW models fits into a threaded opening on the carburetor, below the engine air cleaner.

Note: The heater requires a continuous source of power. Plug the carburetor heater into a 120 VAC receptacle provided on the generator set.

Kit Contents

Models	6-14 kW	17-20 kW
Kits	GM19462-KP1-QS	GM57969-KP1-QS
Description	Qty.	Qty.
Bushing	1	2
